DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-23, drawn to a genetically modified plant cell.

Group II, claim(s) 24-25, drawn to an isolated protein.

Group III, claim(s) 26-30, drawn to "obtainable" starch.

The inventions are independent or distinct, each from the other because:

The above groupings share the technical feature of a class 3 branching enzyme.

However, this feature is not special because it does not constitute an advance over the prior art. Poulson et al (WO0170942) disclose a transgenic plant transformed with antisense constructs from starch branching enzyme I (a class 3 branching enzyme as defined in the specification of the current application) from potato (see Example I in particular).

Additionally, each invention has features not required by the others.

For example, Group I does not require the protein of Group II, nor the resultant starch required by Group III. Group II does not require the plant transformation materials and methods required by Group I as the protein can be synthesized in vitro or by other

Art Unit: 1638

expression systems, nor does Group II require the resultant starch required by Group III. Group III requires neither the plant transformation steps, nor the protein of Groups I and II respectively as the starch may also be obtained from other plant sources and other combinations of genes that would give the same starch profile. It is well known in the art that other combinations may alter amylose to amylopectin ratios and therefore arrive at the starch of Group III through other means.

For the reasons given above, restriction is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brent Page whose telephone number is (571)-272-5914. The examiner can normally be reached on Monday-Friday 8-5.
